

A Brief Introduction to Economics

Zhiyong Yao

School of Management, Fudan University

September 1, 2025

- What is Economics?

- What is Economics?
- Science of human being

- What is Economics?
- Science of human being
- **Homo Economicus**

Perfection to Imperfection

- Perfect rationality, perfect competition, perfect information, perfect institutions.....

Perfection to Imperfection

- Perfect rationality, perfect competition, perfect information, perfect institutions.....
- imperfect rationality, imperfect competition, asymmetric information, imperfect institutions....

Perfection to Imperfection

- Perfect rationality, perfect competition, perfect information, perfect institutions.....
- imperfect rationality, imperfect competition, asymmetric information, imperfect institutions....
- behavioral economics, game theory and information economics, industrial organization, institutional economics.....

Narrow Definition and Content

- How to allocate resources efficiently

Narrow Definition and Content

- How to allocate resources efficiently
- Market economy: institutions including property rights are well-defined.

Narrow Definition and Content

- How to allocate resources efficiently
- Market economy: institutions including property rights are well-defined.
- Consumer maximizes utility, subject to budget constraint

$$\max_x u(x); \quad \text{subject to } px \leq I$$

Narrow Definition and Content

- How to allocate resources efficiently
- Market economy: institutions including property rights are well-defined.
- Consumer maximizes utility, subject to budget constraint

$$\max_x u(x); \quad \text{subject to } px \leq I$$

- Firm maximizes profits, subject to technology constraint

$$\max_q pq - c(q); \quad \text{subject to } q \leq f(K, L)$$

Narrow Definition and Content

- How to allocate resources efficiently
- Market economy: institutions including property rights are well-defined.
- Consumer maximizes utility, subject to budget constraint

$$\max_x u(x); \quad \text{subject to } px \leq I$$

- Firm maximizes profits, subject to technology constraint

$$\max_q pq - c(q); \quad \text{subject to } q \leq f(K, L)$$

- From consumer problem, we obtain the Demand function,

Narrow Definition and Content

- How to allocate resources efficiently
- Market economy: institutions including property rights are well-defined.
- Consumer maximizes utility, subject to budget constraint

$$\max_x u(x); \quad \text{subject to } px \leq I$$

- Firm maximizes profits, subject to technology constraint

$$\max_q pq - c(q); \quad \text{subject to } q \leq f(K, L)$$

- From consumer problem, we obtain the Demand function,
- From firm problem, we obtain the Supply function

Narrow Definition and Content

- How to allocate resources efficiently
- Market economy: institutions including property rights are well-defined.
- Consumer maximizes utility, subject to budget constraint

$$\max_x u(x); \quad \text{subject to } px \leq I$$

- Firm maximizes profits, subject to technology constraint

$$\max_q pq - c(q); \quad \text{subject to } q \leq f(K, L)$$

- From consumer problem, we obtain the Demand function,
- From firm problem, we obtain the Supply function
- Put Demand and Supply together, we obtain market equilibrium
($p^*, x^* = q^*$)

Narrow Definition and Content

- How to allocate resources efficiently
- Market economy: institutions including property rights are well-defined.
- Consumer maximizes utility, subject to budget constraint

$$\max_x u(x); \quad \text{subject to } px \leq I$$

- Firm maximizes profits, subject to technology constraint

$$\max_q pq - c(q); \quad \text{subject to } q \leq f(K, L)$$

- From consumer problem, we obtain the Demand function,
- From firm problem, we obtain the Supply function
- Put Demand and Supply together, we obtain market equilibrium $(p^*, x^* = q^*)$
- Partial equilibrium as well as general equilibrium

Market efficiency and Perfect Economy

- Formally prove the efficiency of the "invisible hand" (Smith, 1776)

Market efficiency and Perfect Economy

- Formally prove the efficiency of the "invisible hand" (Smith, 1776)
- Two welfare theorems: Every competitive equilibrium is Pareto optimal; Every Pareto optimal resource allocation can be achieved through a competitive equilibrium.

Market efficiency and Perfect Economy

- Formally prove the efficiency of the "invisible hand" (Smith, 1776)
- Two welfare theorems: Every competitive equilibrium is Pareto optimal; Every Pareto optimal resource allocation can be achieved through a competitive equilibrium.
- There are preconditions for the market efficiency or perfect competition

Market efficiency and Perfect Economy

- Formally prove the efficiency of the "invisible hand" (Smith, 1776)
- Two welfare theorems: Every competitive equilibrium is Pareto optimal; Every Pareto optimal resource allocation can be achieved through a competitive equilibrium.
- There are preconditions for the market efficiency or perfect competition
 - Many buyers and sellers, no market power or monopoly

Market efficiency and Perfect Economy

- Formally prove the efficiency of the "invisible hand" (Smith, 1776)
- Two welfare theorems: Every competitive equilibrium is Pareto optimal; Every Pareto optimal resource allocation can be achieved through a competitive equilibrium.
- There are preconditions for the market efficiency or perfect competition
 - Many buyers and sellers, no market power or monopoly
 - Free entry and exit, no barrier to entry

Market efficiency and Perfect Economy

- Formally prove the efficiency of the "invisible hand" (Smith, 1776)
- Two welfare theorems: Every competitive equilibrium is Pareto optimal; Every Pareto optimal resource allocation can be achieved through a competitive equilibrium.
- There are preconditions for the market efficiency or perfect competition
 - Many buyers and sellers, no market power or monopoly
 - Free entry and exit, no barrier to entry
 - Complete or perfect information

Market efficiency and Perfect Economy

- Formally prove the efficiency of the "invisible hand" (Smith, 1776)
- Two welfare theorems: Every competitive equilibrium is Pareto optimal; Every Pareto optimal resource allocation can be achieved through a competitive equilibrium.
- There are preconditions for the market efficiency or perfect competition
 - Many buyers and sellers, no market power or monopoly
 - Free entry and exit, no barrier to entry
 - Complete or perfect information
 - Homogenous products

Market efficiency and Perfect Economy

- Formally prove the efficiency of the "invisible hand" (Smith, 1776)
- Two welfare theorems: Every competitive equilibrium is Pareto optimal; Every Pareto optimal resource allocation can be achieved through a competitive equilibrium.
- There are preconditions for the market efficiency or perfect competition
 - Many buyers and sellers, no market power or monopoly
 - Free entry and exit, no barrier to entry
 - Complete or perfect information
 - Homogenous products
 - Institutions are perfect and property rights are well-defined

Market efficiency and Perfect Economy

- Formally prove the efficiency of the "invisible hand" (Smith, 1776)
- Two welfare theorems: Every competitive equilibrium is Pareto optimal; Every Pareto optimal resource allocation can be achieved through a competitive equilibrium.
- There are preconditions for the market efficiency or perfect competition
 - Many buyers and sellers, no market power or monopoly
 - Free entry and exit, no barrier to entry
 - Complete or perfect information
 - Homogenous products
 - Institutions are perfect and property rights are well-defined
 - No externality, no public goods, etc.

Imperfection and Inefficiency

- Monopoly, oligopoly (game theory), monopolistic competition

Imperfection and Inefficiency

- Monopoly, oligopoly (game theory), monopolistic competition
- Asymmetry information

Imperfection and Inefficiency

- Monopoly, oligopoly (game theory), monopolistic competition
- Asymmetry information
- Externality, public goods

Imperfection and Inefficiency

- Monopoly, oligopoly (game theory), monopolistic competition
- Asymmetry information
- Externality, public goods
- Government regulation and intervention (government failures)

Game theory and Information Economics

- Game theory studies interactions between agents.

Game theory and Information Economics

- Game theory studies interactions between agents.
- Cournot (1837); Neumann and Morgenstern (1944); Nash (1950)

Game theory and Information Economics

- Game theory studies interactions between agents.
- Cournot (1837); Neumann and Morgenstern (1944); Nash (1950)
- Extensively been used in Economics, Politics, Law, Business and Management, etc.

Game theory and Information Economics

- Game theory studies interactions between agents.
- Cournot (1837); Neumann and Morgenstern (1944); Nash (1950)
- Extensively been used in Economics, Politics, Law, Business and Management, etc.
- Complete information: static and dynamic

Game theory and Information Economics

- Game theory studies interactions between agents.
- Cournot (1837); Neumann and Morgenstern (1944); Nash (1950)
- Extensively been used in Economics, Politics, Law, Business and Management, etc.
- Complete information: static and dynamic
- **Incomplete information: static and dynamic**

Game theory and Information Economics

- Game theory studies interactions between agents.
- Cournot (1837); Neumann and Morgenstern (1944); Nash (1950)
- Extensively been used in Economics, Politics, Law, Business and Management, etc.
- Complete information: static and dynamic
- Incomplete information: static and dynamic
- Nobel prize winners: John Nash et al.

Game theory and Information Economics

- Game theory studies interactions between agents.
- Cournot (1837); Neumann and Morgenstern (1944); Nash (1950)
- Extensively been used in Economics, Politics, Law, Business and Management, etc.
- Complete information: static and dynamic
- Incomplete information: static and dynamic
- Nobel prize winners: John Nash et al.
- Information economics study asymmetric information, how to design mechanism to solve the information problem

Game theory and Information Economics

- Game theory studies interactions between agents.
- Cournot (1837); Neumann and Morgenstern (1944); Nash (1950)
- Extensively been used in Economics, Politics, Law, Business and Management, etc.
- Complete information: static and dynamic
- Incomplete information: static and dynamic
- Nobel prize winners: John Nash et al.
- Information economics study asymmetric information, how to design mechanism to solve the information problem
- Incentive theory, contract theory

Game theory and Information Economics

- Game theory studies interactions between agents.
- Cournot (1837); Neumann and Morgenstern (1944); Nash (1950)
- Extensively been used in Economics, Politics, Law, Business and Management, etc.
- Complete information: static and dynamic
- Incomplete information: static and dynamic
- Nobel prize winners: John Nash et al.
- Information economics study asymmetric information, how to design mechanism to solve the information problem
- Incentive theory, contract theory
- Adverse selection, moral hazard, signaling, mechanism design, implementation theory

- Institution Matters. So does organization.

New Institutional Economics, Economics of organization

- Institution Matters. So does organization.
- The interactions between institution, organization and technology

New Institutional Economics, Economics of organization

- Institution Matters. So does organization.
- The interactions between institution, organization and technology
- Market economy is an institution, firm is an organization

New Institutional Economics, Economics of organization

- Institution Matters. So does organization.
- The interactions between institution, organization and technology
- Market economy is an institution, firm is an organization
- Firm theory (Coase, 1937); Transaction cost economics (Coase, 1960; Williamson, 1976); Property right theory

- Gary Becker (Nobel prize winner, 1992): using economic method to analyze human behavior

- Gary Becker (Nobel prize winner, 1992): using economic method to analyze human behavior
- Economic method: rational man maximize his or her objective

Economics Imperialism, Behavioral Economics

- Gary Becker (Nobel prize winner, 1992): using economic method to analyze human behavior
- Economic method: rational man maximize his or her objective
- Politics (Buchanan); History (North, Fogel); Law (Coase, Williamson); Management (Simon); Sociology (Becker); Psychology (Kahneman), etc.

Economics Imperialism, Behavioral Economics

- Gary Becker (Nobel prize winner, 1992): using economic method to analyze human behavior
- Economic method: rational man maximize his or her objective
- Politics (Buchanan); History (North, Fogel); Law (Coase, Williamson); Management (Simon); Sociology (Becker); Psychology (Kahneman), etc.
- Financial economics, business economics, international economics, industrial economics, etc.

- Belongs to Philosophy at the beginning

- Belongs to Philosophy at the beginning
- Mathematical revolutionary, all kinds of math have been used in Economics

- Belongs to Philosophy at the beginning
- Mathematical revolutionary, all kinds of math have been used in Economics
- Economic ideas and analyzing tools

- Belongs to Philosophy at the beginning
- Mathematical revolutionary, all kinds of math have been used in Economics
- Economic ideas and analyzing tools
- Economics is one of the foundations of management

History of Economic Analysis

- Classical: Adam Smith, David Ricardo, Carl Marx, John Mill (Supply side, theory of Labor value; specialization)

History of Economic Analysis

- Classical: Adam Smith, David Ricardo, Carl Marx, John Mill (Supply side, theory of Labor value; specialization)
- Marginalist Revolution: Jevons, Menger, Walras (Utility, demand side)

History of Economic Analysis

- Classical: Adam Smith, David Ricardo, Carl Marx, John Mill (Supply side, theory of Labor value; specialization)
- Marginalist Revolution: Jevons, Menger, Walras (Utility, demand side)
- Neoclassical: Marshall (partial equilibrium), Edgeworth, Pareto, Pigou (Equilibrium and welfare)

History of Economic Analysis

- Classical: Adam Smith, David Ricardo, Carl Marx, John Mill (Supply side, theory of Labor value; specialization)
- Marginalist Revolution: Jevons, Menger, Walras (Utility, demand side)
- Neoclassical: Marshall (partial equilibrium), Edgeworth, Pareto, Pigou (Equilibrium and welfare)
- Keynesian Revolutionary (Macroeconomics)

History of Economic Analysis

- Classical: Adam Smith, David Ricardo, Carl Marx, John Mill (Supply side, theory of Labor value; specialization)
- Marginalist Revolution: Jevons, Menger, Walras (Utility, demand side)
- Neoclassical: Marshall (partial equilibrium), Edgeworth, Pareto, Pigou (Equilibrium and welfare)
- Keynesian Revolutionary (Macroeconomics)
- Post-Keynesian (Neoclassical Synthesis), New classical (Monetary, Rational Expectation, RBC), New Keynesian

History of Economic Analysis

- Classical: Adam Smith, David Ricardio, Carl Marx, John Mill (Supply side, theory of Labor value; specialization)
- Marginalist Revolution: Jevons, Menger, Walras (Utility, demand side)
- Neoclassical: Marshall (partial equilibrium), Edgeworth, Pareto, Pigou (Equilibrium and welfare)
- Keysian Revolutionary (Macroeconomics)
- Post-Keysian (Neoclassical Synthesis), New classical (Monetary, Rational Expectation, RBC), New Keysian
- Game theory, information economics, behavioral and experimental economics

- "The ideas of economists and political philosophers, both when they are right and when they are wrong, are more powerful than is commonly understood. Indeed the world is ruled by little else."

- "The ideas of economists and political philosophers, both when they are right and when they are wrong, are more powerful than is commonly understood. Indeed the world is ruled by little else."
- "Practical men, who believe themselves to be quite exempt from any intellectual influences, are usually the slaves of some defunct economists."

- "The ideas of economists and political philosophers, both when they are right and when they are wrong, are more powerful than is commonly understood. Indeed the world is ruled by little else."
- "Practical men, who believe themselves to be quite exempt from any intellectual influences, are usually the slaves of some defunct economists."
- "Madmen in authority, who hear voices in the air, are distilling their frenzy from some academic scribbler of a few years back."

- "The ideas of economists and political philosophers, both when they are right and when they are wrong, are more powerful than is commonly understood. Indeed the world is ruled by little else."
- "Practical men, who believe themselves to be quite exempt from any intellectual influences, are usually the slaves of some defunct economists."
- "Madmen in authority, who hear voices in the air, are distilling their frenzy from some academic scribbler of a few years back."
- "I am sure that the power of vested interests is vastly exaggerated compared with the gradual enroachment of ideas."

Economic Theory and Economy

- "The ideas of economists and political philosophers, both when they are right and when they are wrong, are more powerful than is commonly understood. Indeed the world is ruled by little else."
- "Practical men, who believe themselves to be quite exempt from any intellectual influences, are usually the slaves of some defunct economists."
- "Madmen in authority, who hear voices in the air, are distilling their frenzy from some academic scribbler of a few years back."
- "I am sure that the power of vested interests is vastly exaggerated compared with the gradual enroachment of ideas."
- Covid-19 pandemic and world economy

Economic Theory and Economy

- "The ideas of economists and political philosophers, both when they are right and when they are wrong, are more powerful than is commonly understood. Indeed the world is ruled by little else."
- "Practical men, who believe themselves to be quite exempt from any intellectual influences, are usually the slaves of some defunct economists."
- "Madmen in authority, who hear voices in the air, are distilling their frenzy from some academic scribbler of a few years back."
- "I am sure that the power of vested interests is vastly exaggerated compared with the gradual enroachment of ideas."
- Covid-19 pandemic and world economy
- China's economy and its future
